14th International Conference on Practical Applications of Agents and Multi-Agent Systems
University of Sevilla - Sevilla (Spain) | 1st-3rd June, 2016 |
www.paams.net

Agenda

- **Dynamic Energy Management**
 - **SCADA Office Intelligent Context Awareness Management (SOICAM) System**
- **Case study**
- **Conclusions**

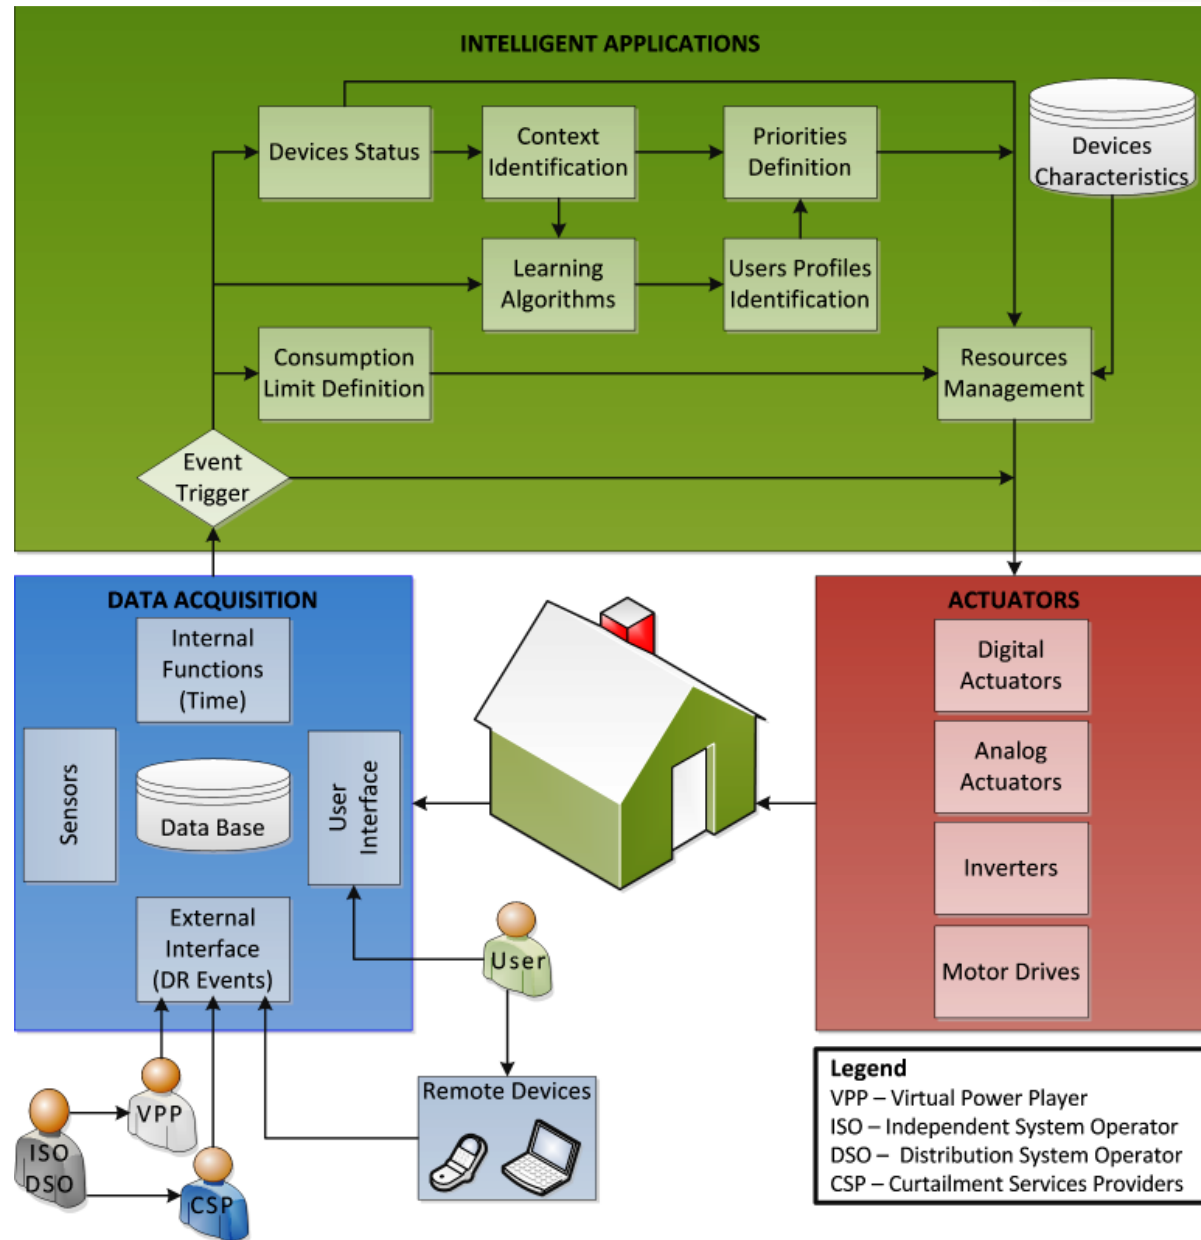

Intelligent management systems for electrical energy consumers

- In the scope of smart grids
- Demand response
 - In face of the consumer's own internal goals
 - Interaction with external entities through the automatic participation in demand response programs

Dynamic scheduling for all energy resources with little interference in the comfort of users

Dynamic Energy Management

SCADA House Intelligent Management (SHIM)

SHIM is part of a real-time management and simulation platform based on multi-agent systems

Multi-Agent Smart Grid Simulation Platform (MASGriP) is a test platform that simulates a competitive environment in power systems

- Real-time data acquisition with energy analyzers
- Direct load control through Programmable Logic Controllers (PLCs)
- Physical and simulated loads can be included

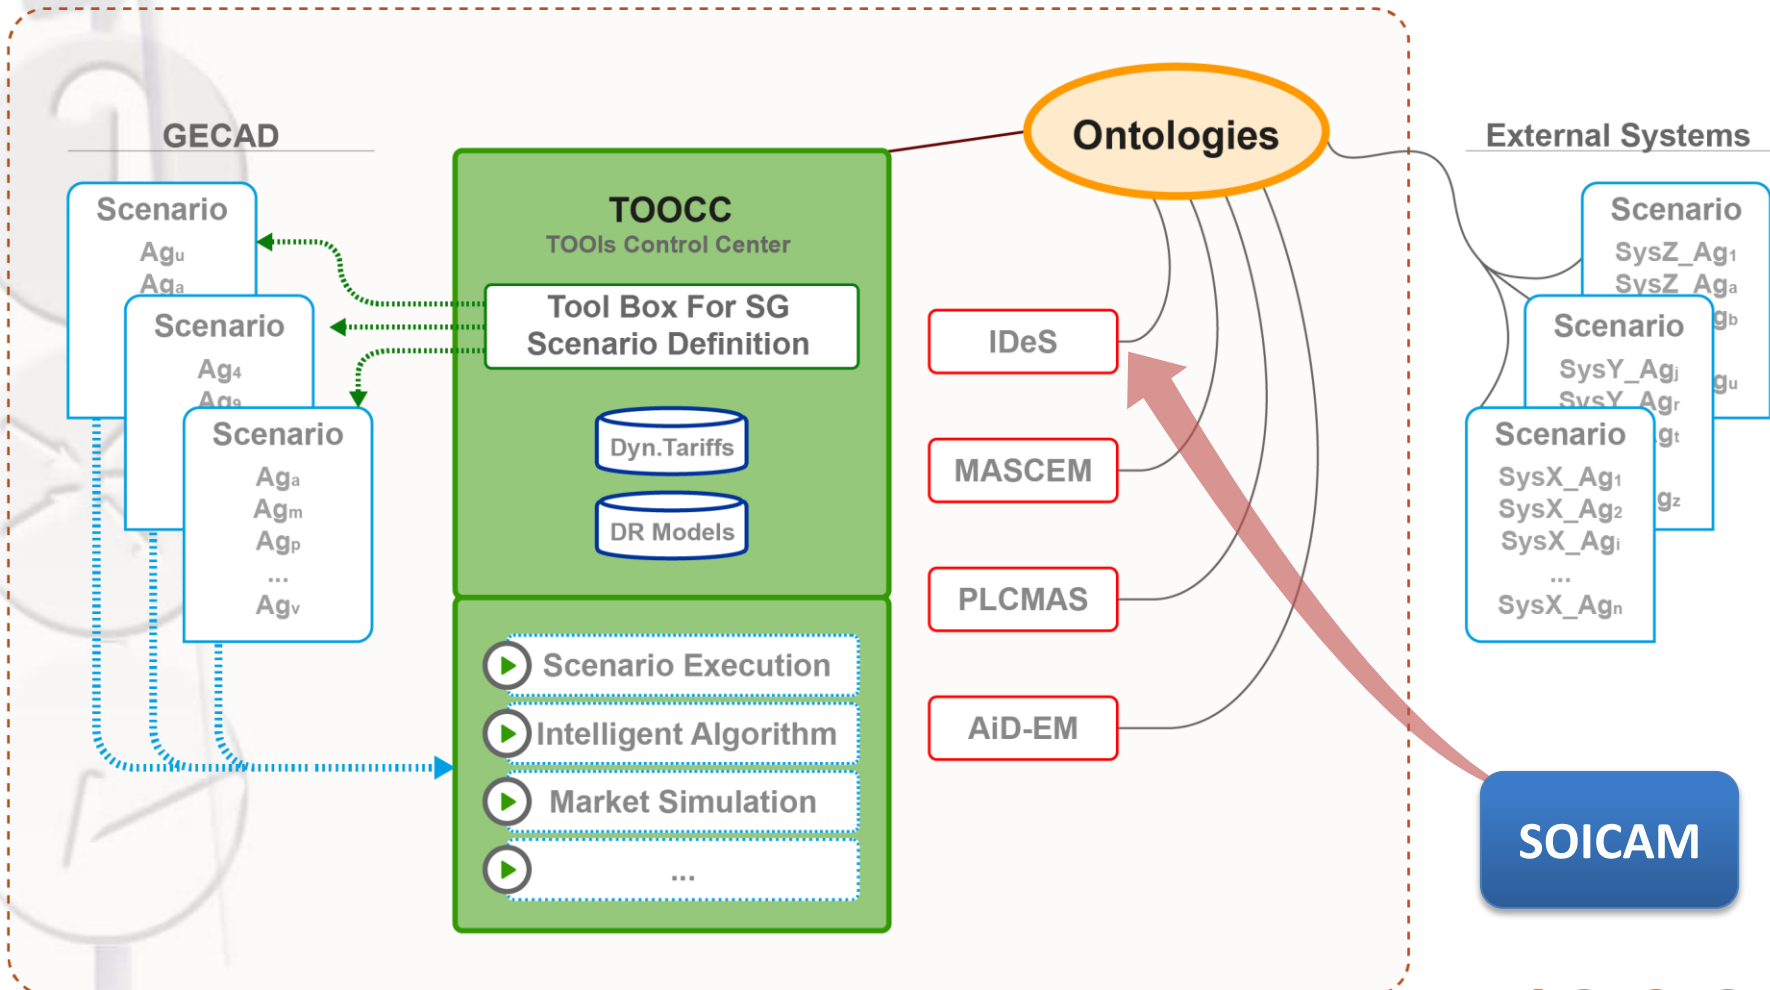

SCADA Office Intelligent Context Awareness Management (SOICAM) System

Dynamic Energy Resources Priority (DERP)

- **Loads**
- **Distributed generation**
- **Suppliers**
- **Demand response events**

Dynamic Energy Management

Multi Agent Smart Grid Tools

One Office Building in ISEP campus (30 users)

KNOWLEDGE LAYER

Intelligent applications and services

MULTI-AGENT
SYSTEM LAYER

Multi-Agent System(s)

GATEWAY LAYER

Real buildings and equipment Developed gateways for real-time data acquisition and control

REAL-TIME
SIMULATION LAYER

Real-time simulator for all the components that we miss in our system

Dynamic Energy Resources Priority (DERP)

- 30 PV panels (250 Wp each)
- 5 analyzers -> real-time consumption data
 - 116 loads grouped in 3 types:
 - HVAC
 - Lights
 - Sockets

Consumption and generation data

Rooms and loads monitored by analyzer N1

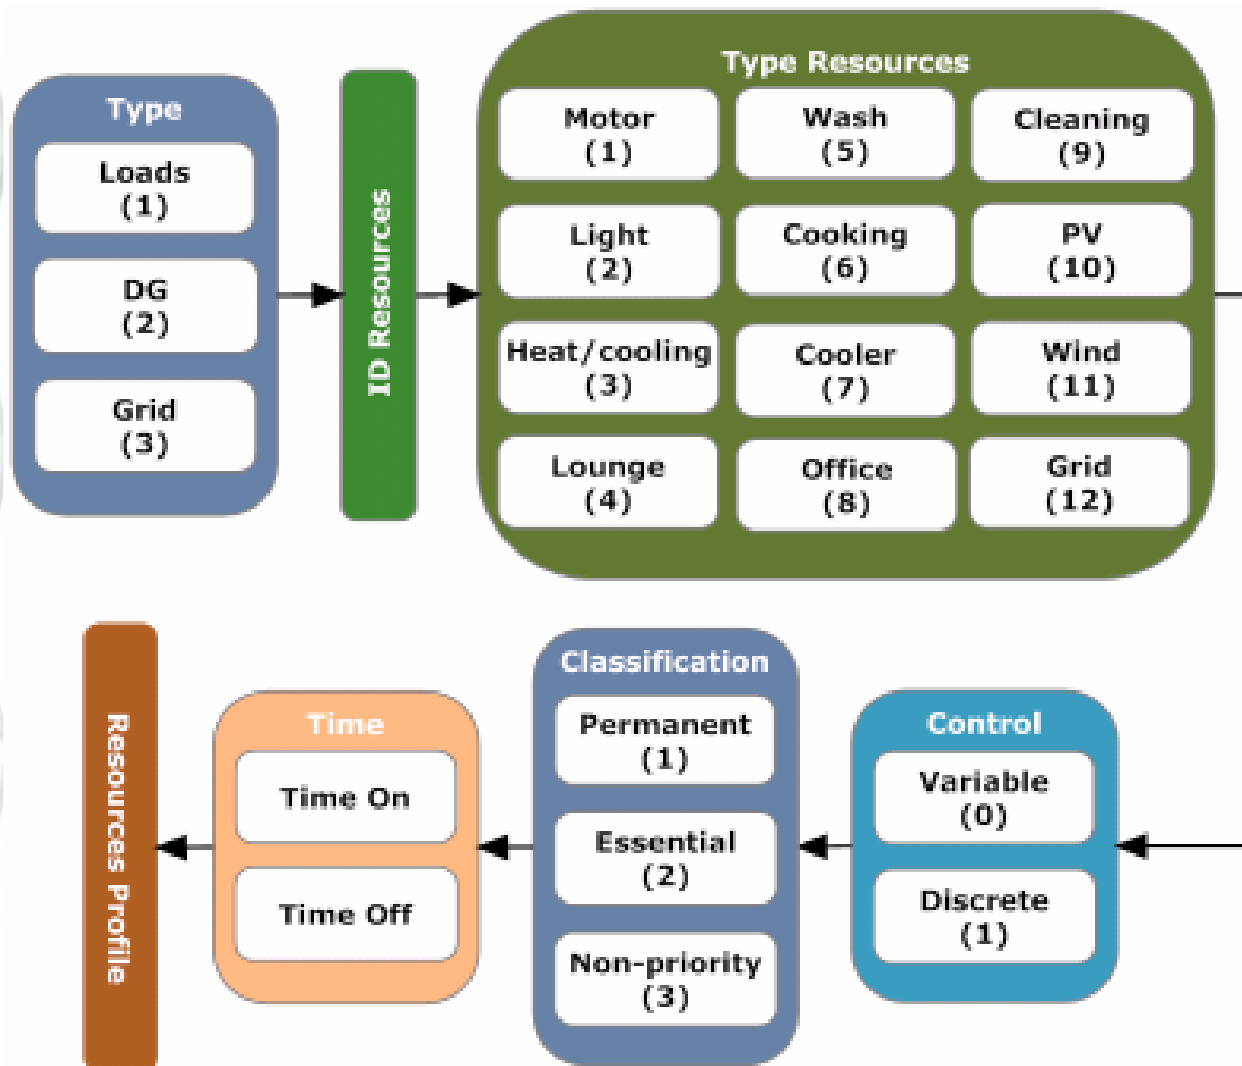

±

Analyzer	Division	Type	Loads	Quantity	Total Power (W)	Electrical Circuit
N1	N101	Office	HVAC	1	1000	P1
			Fluorescent lamp	4	232	P2
			Compact lamp	2	36	P2
			Monitor	5	1357	P3
			Computer	2	950	P3
			Laptop	1	90	P3
	N102	Office	HVAC	1	1320	P1
			Fluorescent lamp	4	232	P2
			Monitor	8	2438	P3
			Computer	4	1900	P3
			Laptop	1	90	P3
	N103	Office	HVAC	1	910	P1
			Fluorescent lamp	4	232	P2
			Monitor	4	1311	P3
			Computer	2	950	P3

Rooms and loads monitored by analyzers N4 and N5

N4	Hall	<u>Common Services</u>	HVAC	2	1920	P1
			<u>Fluorescent lamp</u>	4	232	P2
			<u>Compact lamp</u>	2	36	P2
			<u>Water heater</u>	1	1500	P3
N5	N110	<u>Kitchen</u>	HVAC	1	1000	P1
			<u>Halogen lamp</u>	2	50	P2
			<u>Compact lamp</u>	1	14	P2
			<u>Refrigerator</u>	1	130	P3
			<u>Coffe machine</u>	1	1300	P3
			<u>Kettler</u>	1	2280	P3
			<u>Microwave</u>	1	2250	P3

Characteristics of the energy resources

Resource scheduling during DR event: detailed scheduling for each type of load

Case study

Resource scheduling during DR event: scheduling for each type of energy resource

Case study

**Analyzer N1 :
Initial and
optimized
consumption
for each load
group type**

- **Dynamic scheduling of the energy resources**
 - The resources priority dynamically changes
 - Interaction between the building and the exterior (grid, suppliers, ...) is considered enabling to minimize the operation costs
 - Interaction with external entities through the automatic participation in demand response programs

The energy management system improves the effectiveness of the consumer's

- participation in demand response events
- Use of the available energy resources, according to dynamic load priorities

Thank you

*Research Group on Intelligent Engineering and Computing
 for Advanced Innovation and Development*
